Step 2

Step 4

Removable Brake Winch Handle

STEP 1: Lower your martin system as if doing a nest check.

STEP 2: Unthread the large nut from the winch.

STEP 3: After removing the spring, unthread the winch handle. You will need to hold the winch spool, on which the cable is wound, in order to be able to unthread the handle.

STEP 4: Thread the new adapter onto the winch.

STEP 5: To raise and lower your martin system, slide the removable handle over the adaptor. When finished, slide the handle off and store at a safe location.
